Theme Assignment 1: XML and DTD

Using the provided XML file (validation.xml) create a **DTD** file that can be used to validate XML files that would describe the same data.

Provided files

validation.xml – A sample XML file that needs to be validated by your final DTD.

Task

Following the validation rules provided in **validfile.xml**, create a new validation file, **TA.dtd**.

Remember to link the XML file to the newly constructed **DTD** file when validating.

WARNING:

If you upload a **txt file** or a **not well-form** document, you will receive **zero**.

If your uploaded **DTD** does not validate the provided file, you will receive at most 50% for this practical.

Submission

- **Compress** your final DTD file (TA.dtd) into an archive named **TA1.zip**.
- Submit your ZIP file to the upload slot provided on clickUP before the deadline.
- Ensure that you have a backup of your final submission.
